

SHOWROOM CHECK

Photo Proof That the Room Still Looks Right

User Manual | 369ai

What this does

Showroom Check proves two things at once: that somebody actually visited the room, and that the room still looks the way it is meant to look. You photograph the room once, from one spot, looking each of four ways, with everything where it belongs. Every round after that is compared against those photographs, and anything that no longer matches is flagged.

Part 1 - Setting Up: a manager sets the office timezone, the daily rounds and their times, takes the original photographs and decides who may record. **Part 2 - Everyday Use:** staff open the dashboard and capture a round while its window is open; the server scores it straight away. **Part 3 - Keeping in Order:** reading the reports, fixing a view that will not line up, and watching storage.

BEFORE YOU START: The camera only works on a page whose address begins with **https**. This is a browser rule, not a setting inside the system, and nothing on the dashboard will work until your server is reached over https. Setting up also needs the **Manager** role in Showroom Check. Day-to-day recording needs only the **User** role.

How the check works

Every office has exactly **four views**, fixed forever: Front, Right, Back and Left. You give each one a name in your own words - name it after what is in it rather than which way it faces, because that name is what people are shown when they are asked to photograph it.

Front view	"Reception desk"	<- original photograph, taken once
Right side	"Systems"	<- original photograph, taken once
Back view	"Bags area"	<- original photograph, taken once
Left side	"Meeting table"	<- original photograph, taken once

every round -> a photograph of each view -> compared -> Match %
or one video walked round the room

TIP: A view with **no original** is invisible to the whole feature - it is not asked for, not stored and not scored. Start with one or two views you care about; you do not have to set up all four on day one.

PART 1 - SETTING UP

Done once, by a manager. If your rounds are already listed and the originals are in place, skip to Part 2.

1 Give People a Role

A role decides what somebody may do. Set it under **Settings** → **Users**, pick the person, and under **Showroom Check** choose one of:

Role	What they can do	What they see in the menu
No access	Cannot open Showroom Check at all	Nothing
User	Opens the dashboard and captures a round while its window is open. Cannot change or delete anything.	Check and Help
Manager	Everything above, plus the settings, the rounds, the originals, the reports, and deleting a recording.	Everything

IMPORTANT: Somebody with the **User** role gets the dashboard and the help guides, and nothing else - **History** and **Comparisons** are a manager's screens. They still see on the dashboard that a colleague's round was done, but cannot open that colleague's video or photographs. Only a Manager can delete a recording, which is the only way to record the same round twice in one day.

2 Set the Daily Rounds

Go to **Showroom Check** → **Configuration** → **Settings** and open the **Daily Rounds** tab. Set the **Office Timezone** first, then add one line per visit with a name, a period, a start time, an end time and the days it runs.

Three rules the system will not let you break:

- **A round cannot run past midnight.** For a night round from 22:00 to 02:00, add two rounds: 22:00-23:59 and 00:00-02:00.
- **Two rounds cannot overlap on the same day.** If two were open at once, the dashboard would not know which one is being recorded.
- **A round with no day ticked is refused** - it would never open. Tick at least one day, or untick **Active**.

TIP: Use the **Instructions** field on a round for anything the person needs to know at that hour - "include the pantry and both washrooms". It is shown on the dashboard card while that round's window is open, and again in the camera window.

Settings ?

Cleaning Recording Settings

What to set up, in this order:

1. **Daily Rounds** - your timezone, and the times cleaning happens each day.
2. **Recording** - how long each clip runs, and how sharp it is.
3. **Who Can Record** - which people are allowed to send a clip.
4. **Keeping Recordings** - how long clips are kept before they are removed.

Daily Rounds Showroom Photos Video Who Can Record Keeping Recordings

Office Timezone ? Asia/Kolkata

Times Per Day ? 7

Every time below is read in the office timezone above, for everyone - so the window opens at the same moment no matter where the person looking at it is.

Name	Period	From	To	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Active	
Morning Round	Morning	09:00	12:30								ON	
Test evng	Morning	12:39	14:00								ON	
Test evng 2	Morning	06:16	06:45								ON	
New round	Evening	20:00	21:00								ON	
New round	Night	21:00	22:00								ON	
Afternoon Round	Afternoon	14:00	17:30								ON	
Evening Round	Evening	18:00	20:00								ON	
Add a line												

A round cannot run past midnight. For a night round from 22:00 to 02:00, add two rounds: 22:00-23:59 and 00:00-02:00.

Configuration → Settings - the office timezone and one line per round

IMPORTANT: Every time you type is read in the **Office Timezone**, for everybody - not in each person's own profile timezone. A supervisor reviewing from another country sees the same 09:00-12:30 window as the person standing in the room. Getting this one field wrong throws the whole schedule out, so check it first.

The same rounds can also be opened on their own under **Configuration → Rounds**, which is easier when you have a lot of them.

Evening Round	Evening	18:00	20:00	Mon, Tue, Wed, Thu, Fri, Sat	ON

Configuration → Rounds - every round, its window and the days it runs

3 Photograph the Originals

Still in **Settings**, open the **Showroom Photos** tab. Stand in one spot with the room exactly as it should be, and photograph each of the four ways in turn. Upload each one against its direction and fill in:

- **What This Shows** - your own name for the view ("Systems", "Bags area"). This is what people are shown when they are asked to photograph it.
- **Original** - the photograph itself.
- **What To Look For** - optional, anything a person should know: "stand by the door", "every desk has its chair".

Originals Set tells you how many of the four are done. Underneath, two numbers decide when a round is flagged:

Setting	Default	What it means
Warn Below	60	A view scoring under this is flagged amber - worth a look.
Alert Below	50	A view scoring under this is flagged red - something has changed.

GOOD TO KNOW: Two photographs of a room where nothing has moved do **not** score 100. The light changes and nobody stands in exactly the same place twice, so a good match usually lands in the **seventies or eighties**, and something genuinely missing scores far lower. Sixty and fifty are a starting point - leave them for a week, look at what your own rooms actually score under **Reporting** → **Comparisons**, then move them to suit.

WATCH OUT: **Require the photographs** is off to begin with, and that is deliberate. It refuses any round that does not carry a photograph for every view. Set the originals up first, check they look right, make sure everybody's phone can actually send pictures - *then* turn it on. Switching it on any earlier stops people recording at all, on the same morning you set the originals up.

4 Choose What a Round Records

The **Video** tab decides whether a round can be captured as a video clip at all, or only as photographs.

Setting	What it does
Also record a video	On by default. Turn it off to make a round four photographs and nothing else. Leave it on and the person capturing the round can walk it as a video instead, and the four views are read back out of the recording. A video costs far more to upload and store.
Recording Duration	How long the clip runs. Thirty to sixty seconds is plenty.
Video Quality	Low - 480p, Medium - 720p (default), or High - 1080p.
Video Format	WebM works in Chrome, Edge and Firefox. MP4 records only where the browser supports it; elsewhere it falls back to WebM by itself.
Estimated Size Per Recording	Worked out from the two settings above, so the storage cost is visible before you raise the duration.
Which side (phones only)	Rear or front camera. A laptop has one camera and ignores this.
Maximum Upload Size (MB)	Applies only to this page. Every other upload form in the database keeps its own limit.

WATCH OUT: A single recording cannot be longer than **five minutes**, and the form refuses to save a longer one - it tells you the file size it would have produced. The server cuts off any request that runs past two minutes, so a long clip would be lost part-way through the upload. **No sound is ever recorded.**

TIP: On a computer with more than one camera, press **Test / choose camera** on this tab. The choice is remembered *on that computer only*, so two recording stations can each use their own camera. Nothing is saved by a test.

If this tab shows a warning about recordings

Reading the four views out of a recording needs a piece of software called **OpenCV** on the server. It is installed for you when the module is installed or upgraded, so most sites never see this. When the install was refused - usually because the account the server runs as cannot write to its own program folder - the Video tab shows:

WATCH OUT: "Recordings cannot be checked on this server." Videos are still recorded and kept, but nothing is scored from them, and the app asks for the photographs instead. A system administrator can press **Install it now** on that warning once the account has been given write access. Everything else - the photographs, the scores, the reports - carries on working.

5 Say Who Can Record

On the **Who Can Record** tab, choose either **anyone with the Showroom Check "User" role**, or **only the users listed below** and name them. The rule is enforced on the server when the round is saved, not just by greying out the button.

Upload Grace Period (5 minutes by default) covers the honest case: a round started 20 seconds before the window closed still has to finish and upload afterwards. The *start* must fall inside the window; the upload itself is accepted for this long after it closed.

6 Decide How Long to Keep Recordings

On the **Keeping Recordings** tab set a number and a unit, then choose what happens when a recording gets that old:

On Expiry	What happens
Delete the video, keep the log entry	Recommended. The video is the entire storage cost; the entry - "Morning Round, 1 May, recorded by Ravi at 09:14", with its scores - is a few hundred bytes and is what answers a question a year later.
Delete the whole record	Removes everything. That day then shows up as a missed round in the report, which is misleading.

GOOD TO KNOW: Set the number to **0** to keep recordings forever. Free disk space does not go up the moment something is deleted - the file is marked, then removed during a later clean-up, usually within a day. That is normal.

7 Turn On AI Review - Optional

Go to **Configuration** → **AI Review**. This is off by default, and while it is off nothing is ever sent anywhere. Switch on **Enable AI Review**, choose where the AI runs, fill in the model and key, then press **Test connection**.

AI Review Settings

The AI gives a second opinion, not a verdict. Judging cleanliness from a few pictures is a matter of opinion, and it will sometimes be wrong - a tidy room in poor light can look dirty, and a shiny floor can hide dust. Use it to spot rounds worth looking at yourself. Nothing is ever rejected automatically, and a person always has the final say.

Enable AI Review ☒

WHERE THE AI RUNS

AI Provider ☒ Google Gemini (over the internet) ☐ Ollama / Llama (on your own network) ☐ Other, OpenAI-compatible (LM Studio, vLLM...)

Pictures Per Recording 3

Give Up After (seconds) 120

API Key / Token Paste your key here

Model gemini-2.5-flash

Maximum Reply Length 1,024

With Gemini, pictures of your office - and anyone in them - are sent to Google. If that is a problem, choose Ollama instead and the pictures never leave your network.

What To Check Extra Instructions

Each line is judged separately. Being specific about what a pass looks like gives far steadier answers than a vague one.

Check	What Good Looks Like	Active	
Floor is clean	No litter, dust, stains or spills on the floor	☒	
Bins emptied	Waste bins are empty or nearly so, nothing overflowing	☒	
Surfaces wiped	Desks and tables are clear of dust, crumbs and marks	☒	
Area is tidy	Chairs in place, no clutter or items left lying about	☒	

Configuration → AI Review - the provider, the model, and the checklist it judges

Provider	Where the pictures go
Google Gemini	Over the internet, to Google. Needs an API key.
Ollama / Llama	A machine on your own network. The pictures never leave it.
Other, OpenAI-compatible	LM Studio, vLLM and similar. Needs a Base URL.

The **What To Check** tab holds the checklist. Each line is judged separately, and being specific about what a pass looks like gives far steadier answers - "no litter, dust or stains on the floor" works much better than "floor ok". **Extra Instructions** is for the things only you know: "the store room floor is permanently stained, ignore that".

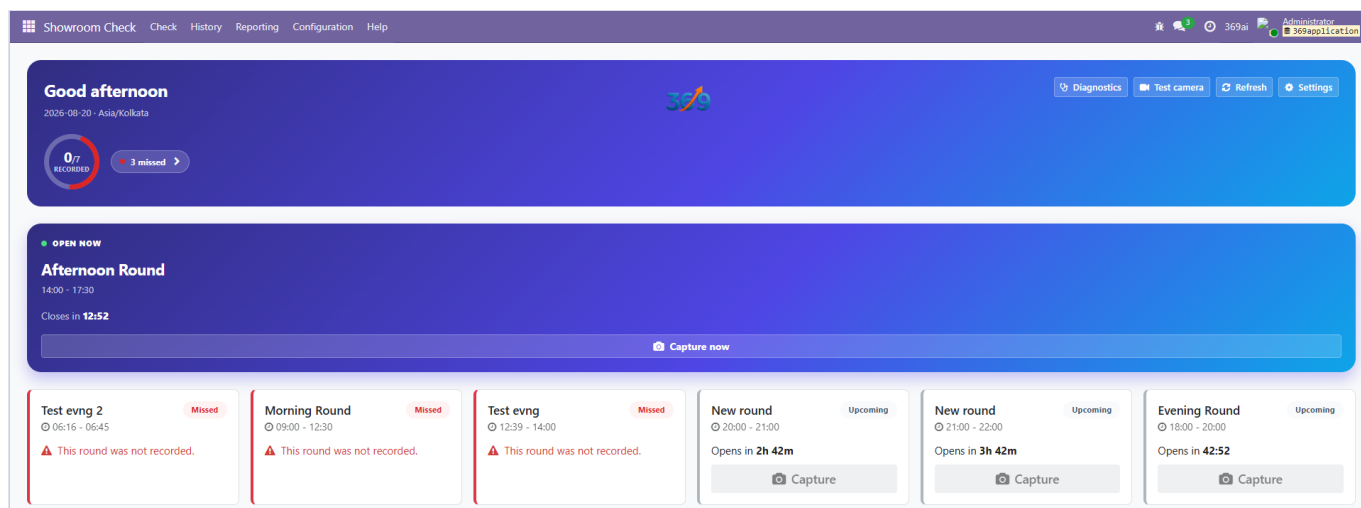

WATCH OUT: With Gemini, pictures of your office - and anyone in them - are sent to Google. If that is a problem, choose **Ollama** instead and the pictures never leave your network.

IMPORTANT: The AI gives a **second opinion, not a verdict**. A tidy room in poor light can look dirty and a shiny floor can hide dust. Nothing is ever rejected automatically, and a person always has the final say.

PART 2 - EVERYDAY USE

1 The Dashboard

Open **Showroom Check** (or **Check**). Everything a person needs for today is on this one page: the ring showing how many of today's rounds are done, the round that is open right now, and a card for every other round.

The dashboard - the open round at the top, every other round of the day below

Card	What it means	What to do
Upcoming	Grey, counting down. The window has not started yet.	Nothing - the button turns on by itself
Open now	Blue, with the time left in the window.	Press Capture now / Record now
Recorded	Green. It is done, and it says who did it.	Press Watch to see it, if it is yours
Missed	Red. The window passed and nothing was recorded.	Nothing can be recorded now - the day is gone

The buttons at the top right: **Test camera** checks the camera without using up the day's real recording, **Refresh** re-checks with the server, **Settings** (managers only) opens the configuration, and **Diagnostics** appears in developer mode.

TIP: The countdown on screen is a prediction; only the server decides when a window is really open. When a countdown reaches zero the card says **Opening...** for a moment while it asks. That is why the button can lag a second or two behind the clock - it is being correct, not slow.

2 Capture a Round

A round can be captured two ways, and both end with the same four views being scored:

Recorded as	What the person does	Where the four views come from
Photographs	Photographs each view in turn, by the name you gave it	The pictures they took
Video	Walks the round once, turning on the spot, and sends the clip	The server finds each view inside the recording and cuts it out

The choice is offered in the **Showroom Check mobile app**. A video round is only offered where the video is switched on *and* the server can read one - see the warning described in Part 1, step 4. Capturing from a computer's browser always records the clip:

1. The browser asks for permission to use the camera - click **Allow**.
2. A preview appears, telling you how long the recording will last and roughly how big it will be. Press **Start recording**.
3. A countdown runs with a red **REC** badge. It stops on its own; **Stop now** ends it early.
4. The clip uploads with a progress bar. **Keep the window open until it finishes**.

5. A green tick confirms the round is recorded for today.

WATCH OUT: "The camera is already being used by another program" is by far the most common problem. Teams, Zoom and similar apps hold onto the camera even when they look closed. Close them fully, then press **Try again**.

GOOD TO KNOW: If the upload fails, the recording is **not lost**. The window offers **Try again**, and **Save video to this computer** so you can send it to your administrator. Do not close the window until you have done one or the other.

GOOD TO KNOW: A video round is read as soon as it arrives, so the person who walked it is told what it scored rather than having to come back to it. A view the walk never showed is written down as unseen, with the reason on it, instead of leaving a gap.

TIP: A round captured from a browser records the clip but does not photograph the views. A manager can open it and press **Read views from recording** - the button is on any round that has a clip, which also covers rounds recorded before the originals were set up.

One recording per round per day. Once a round is done its card turns green and the button is gone. If it truly has to be done again, a manager deletes the existing recording - see Part 3.

3 Look Back at What Was Recorded

History lists every round, newest first, grouped by month. It is a manager's screen - the people walking the rounds get the dashboard instead.

Date	Slot	Recorded By	Started At	Photogra...	Match (arrangement)	Verdict	AI Review
▼ August 2026 (6)					7	28	
Aug 20	COMPARISON TEST SAMPLES	OdooBot	Aug 20, 1:02 PM	1	79 %	As expected	Not reviewed
Aug 19	COMPARISON TEST SAMPLES	OdooBot	Aug 20, 1:02 PM	1	9 %	Something has changed	Not reviewed
Aug 19	Evening Round	Administrator	Aug 19, 7:41 PM	2	0 %	Could not line up	Not reviewed
Aug 18	COMPARISON TEST SAMPLES	OdooBot	Aug 20, 1:02 PM	1	79 %	As expected	Not reviewed
Aug 17	COMPARISON TEST SAMPLES	OdooBot	Aug 20, 1:02 PM	1	0 %	Something has changed	Not reviewed
Aug 16	COMPARISON TEST SAMPLES	OdooBot	Aug 20, 1:02 PM	1	0 %	Could not line up	Not reviewed

History - every round, with its match score, its verdict and whether the AI has looked at it

The two columns worth reading across a whole month are **Match (arrangement)** and **Verdict**. The filters at the top cover *Today*, *This Month*, *My Recordings*, *Video Removed* and *Cut Short*; there is also a calendar view if you would rather see the month laid out.

4 Read a Round's Comparison

Open any round. The photographs sit under **Showroom Photos**, each one beside the original it was compared against - **How it should look** on the left, and on the right either **Today** or **From the recording**, depending on where the picture came from. Click either picture to see it full size. **Recorded As**, on the form and as an optional column in History, says the same thing for the round as a whole.

Photographs only. The video is switched off for this office, so this round is its photographs. They are below, each beside the original it was compared against.

RECORDING	PHOTOGRAPHS
Recorded By [?] Odoobot	Match (arrangement) [?] 79
Started At [?] Aug 20, 1:02 PM	Average Match [?] 79
Ended At [?] Aug 20, 1:02 PM	Worst View [?] Back view
	Compared At [?] Aug 20, 3:56 PM

Showroom Photos Notes Audit

Match (arrangement) [?] 79
Worst View [?] Back view

Average Match [?] 79
Compared At [?] Aug 20, 3:56 PM

Back view
How it should look Today

Similar: 65% 141 matching features
Match: 79%

Use this as the original

A round that came out clean - 79% against its original, verdict "As expected"

Number	The question it answers
Match (arrangement)	Has anything moved? The score of the <i>worst</i> view, not the average - because the worst view is the entire reason anybody is looking.
Average Match	The mean across the views. Too smooth to warn on, but the right number to watch over weeks.
Worst View	Which view pulled the score down.
Similar	Is this even the same view? How much of the same thing is in both pictures. A room that has been emptied is still highly similar to its original - all the same walls are in shot.
matching features	Press it to see the two pictures side by side with a line drawn between every patch that was found in both. This is what the similarity figure is counted from.

GOOD TO KNOW: From the recording is worth noticing beside a low score. A frame cut out of a walk was framed however the phone happened to be held while somebody turned past it, where a photograph was aimed at the view. Judge a video round a little more gently than a photographed one.

IMPORTANT: Similar and **Match** answer different questions and are easy to confuse. A filthy room photographed from exactly the right spot is 100% similar and 0% matched - and that pair of numbers is the whole point. Similar tells you the photograph is of the right thing; Match tells you whether anything in it has moved.

Verdict	What it means	What to do
As expected	At or above Warn Below . The room looks like its original.	Nothing
Worth a look	Between the two thresholds.	Open the round and compare the pictures yourself
Something has changed	Below Alert Below .	Look at the worst view and find out why

Verdict	What it means	What to do
Could not line up	The right view, but the two pictures could not be aligned - usually photographed from a very different spot.	See step 6 below
Not compared	Never compared, or the comparison failed.	Press Compare again

GOOD TO KNOW: The two thresholds are applied when the page is drawn, never stored. Change **Warn Below** or **Alert Below** and the whole history is re-graded instantly, with nothing to recalculate.

5 The Comparisons Report

Reporting → **Comparisons** (managers only) shows the rounds that carry photographs, grouped by day. This is the screen to open once a week: sort by **Match**, or filter by **Verdict**, and everything worth a look rises to the top.

Date	Slot	Recorded By	Photogra...	Match (arrangement)	Verdict	Worst View
16 Aug 2026 (1)			1	0		
Aug 16	COMPARISON TEST SAMPLES	OdooBot	1	0 %	Could not line up	
17 Aug 2026 (1)			1	0		
18 Aug 2026 (1)			1	79		
19 Aug 2026 (2)			3	5		
20 Aug 2026 (1)			1	79		

Reporting → Comparisons - every photographed round, day by day

6 When a View Will Not Line Up

Could not line up is not the same as "something changed". It means the comparison ran, agreed it was the same view, and still could not fit the two pictures over one another - almost always because the original was taken from a different distance or angle to the place the round is actually walked.

COMPARISON TEST SAMPLES	
Aug 16	
Match: 0% · Aug 20, 1:02 PM	
Back view How it should look 	Today Could not line up
Similar: 0% · 1 matching features These may not be the same view - check the original for this view was taken from where the round is actually walked. Use this as the original	

A view that could not be lined up - the message says so plainly instead of guessing a score

The fix is on the card. Find a round whose photograph was taken from where the round is really walked, and press **Use this as the original**. That photograph replaces the original for that view, and every round ever measured against it is scored again.

TIP: The best original is one taken by the same person, on the same phone, from the same spot as the rounds themselves. Do not be precious about the first set you uploaded - replacing it with a real round's photograph usually settles the scores down at once.

Two other messages you may see under a picture:

- **These may not be the same view** - the photograph may be of something else entirely. Check which way the original faces.
- **The original for this view has been replaced since this round was recorded** - the score you are reading was measured against an older original. Press **Compare again** to bring it up to date.

7 Ask the AI for a Second Opinion

If AI review is switched on, a manager can open a round and press **Analyse with AI**. The pictures are sent, and a moment later the round carries a score out of 100, a short summary, a list of anything the model thought was wrong, and a yes / no / cannot tell against every line of your checklist.

AI Review	What it means
Not reviewed	Nobody has asked. Nothing has been sent anywhere.
Reviewed	The score, summary and checklist results are on the round.
Review failed	The reason is stored on the round under Why It Failed .

GOOD TO KNOW: Reviews are run by hand, one round at a time, and never automatically - they cost money on a hosted model and time on a local one, and nobody should be surprised by either. Only rounds recorded *after* AI review was switched on can be reviewed, because the pictures it looks at are captured while recording.

8 Help, On Screen

The **Help** menu is open to everybody, and holds two shelves: **User Manual** for the system itself, and **Mobile App** for using the phone app. Each opens a panel of cards - one per guide, with its own icon and a line saying what it answers.

- **Open guide** opens the guide as a plain page in a new tab, easy to read on any screen and easy to print.
- **Open in PDF doc**, at the top of that page, opens the full document where one has been attached.

TIP: Managers get a **Manage documents** button on the panel. Each entry has a **Title**, a one-line **Description**, an **Icon**, the **Guide** itself and, optionally, a **PDF** - which is where a copy of this manual belongs, so people can reach it without leaving the system. Only real PDFs are accepted; a renamed file is refused. **Shown to** only applies on the Mobile App shelf - the user manual is one shelf everybody shares.

PART 3 - KEEPING IN ORDER

1 Missed Rounds

Reporting → **Missed Rounds** (managers only) lists every round that was scheduled and never recorded. It opens on the last 30 days, and there is a bar chart beside the list for spotting a pattern - one round, or one day of the week, going quietly missing.

- **Do not chase 100.** Watch the bands, not the raw number.
- **Replace an original** with a real round photograph using **Use this as the original** - it re-scores the history for you.
- **Check the Video tab for the warning** about recordings. Where the server is missing OpenCV there is no *Similar* figure, no *matching features* picture, no reading a round out of a recording, and pictures can only be compared when they were taken from nearly the same spot.

Quick Tips

- The whole schedule runs on the **Office Timezone**, not on each person's own.
- A view with no original is never asked for and never scored.
- A good match is 70-80, not 100. Light changes and people do not stand in the same place twice.
- **Similar** answers "is this the same view"; **Match** answers "has anything moved".
- Only a manager deleting a recording re-opens a round. It cannot be archived.
- No sound is recorded - consider telling the people being filmed; in many places that is a legal requirement.
- Deleting a recording does not free disk space at once. The file goes in a later clean-up.
- The camera choice is remembered per computer, not per person or per company.
- The AI is advisory. Nothing is ever rejected automatically.
- A round walked as a video is scored on frames cut out of it. Read those a little more gently than an aimed photograph.
- People walking rounds see only **Check** and **Help**. History and the reports are manager screens.

If Something Goes Wrong

What you see	What to do
"Recording needs a secure (https) connection"	Tell whoever looks after your server that this page has to be served over https, or the browser blocks the camera. Nothing is wrong with the camera.
"The camera is already being used by another program"	Close Teams, Zoom or any other video app completely, then Try again .
"Camera access was blocked"	Click the camera icon in the address bar, choose Allow , then try again.
"This browser cannot record video"	Use Google Chrome or Microsoft Edge on a computer with a camera.
The button is greyed out during the window	Either the round is already recorded today, or you are not on the list under Who Can Record . The card says which.
"You do not have the Showroom Check User role"	Ask an administrator to set the role under Settings → Users.
"This recording's start time is not close enough to the current time"	The clock on that computer is genuinely wrong. Correct it, then record again.
"This cleaning round has already been recorded for that day"	Working as intended. A manager must delete the existing recording first.

What you see	What to do
"Recordings cannot be checked on this server"	OpenCV could not be installed, usually because the account the server runs as cannot write to its own program folder. A system administrator presses Install it now on that warning once it has write access. Photographed rounds carry on scoring meanwhile.
Comparisons is empty although rounds are being recorded	Either no originals have been set, so nothing is being scored - add them under Configuration → Settings → Showroom Photos - or the rounds were captured from a computer's browser, which records the clip but does not photograph the views. Open one and press Read views from recording .
A video round scored nothing at all	Either the server cannot read recordings (see the first row), or the walk never showed the views - each one says which on its own card.
Every view says "Could not line up"	The originals were taken from somewhere the rounds are not walked. Use Use this as the original on a real round photograph.
The video will not play on an old round	It has passed the retention period and been removed. The entry, the photographs and the scores are kept.
Diagnostics is not on the dashboard	It only appears in developer mode. Turn that on, reload, and take a screenshot of the panel - it answers most camera questions in one go.
